I have been buying CS5 since 2008, and there are a lot changes in this version. I still love the new features, but I hate some other new features from this version. There is really too much bloatware in TIFF, Windows, and Mac versions. For example, Windows 8/10 operating systems are only available in TIFF format. In addition, Windows 8/10 operating systems only have TIFF support. Windows 10 bring some great features to Windows users with a touch screen, but bring much bloatware. Also, windows 10, android and iOS operating systems are not software-supported. In a nutshell, if you're using Photoshop, the answer is yes. It's beautiful software. It's been around for a lot of years. It works well, is simple to use, and has a lot of great new things to do and to explore. If you're not using Photoshop, then the answer is no. It's not worth the money. There are easier ways to manipulate photos and really you are throwing your money out the window. Adobe just doesn't care about it's photo customers. I really liked the inclusion of Touch (Learning) that is available by default. It made it very easy. In short, you can move to an untextured canvas, create/import an image, add text, and see the results before the final image is saved. Touch is a core component in the new Photoshop and that means you can continuously customize your images from start to finish. While adding a text is a "joy of simplicity," as the chief noted, the feature is somewhat limited when it comes to text. Even though in previous versions of the software, it was a bit cumbersome to add text in Photoshop, you were able to tweak text to create a neat overall look for your image.

Adobe has launched a new subscription model for Photoshop: instead of paying for a fixed number of core images per month, users pay a monthly fee for a set number of gigabytes used. Use-based pricing is a new approach for Adobe and is likely to be adopted by other services and software-as-a-service products in the future. The fee is based on the volume of work you choose to create—if you hit your storage limit, you won't be able to create new files and lose progress. This new edition of Adobe Photoshop is an ongoing support release. Although Adobe doesn't commit to a release cycle for its desktop software, it aims to ship a new release patch roughly every two years. As with any desktop product, updates may require an additional fee for additional features and accessibility.
