Thanks for the great review! You´re working on so many features… I never used LR Elements, but I used to work on graphic projects in PS (Traditional) that would run into the hundreds of DPI. I used Photoshop Elements for quick proofing, but I had to "cut" that project from my workflow, not having enough time for photoshop anyways. SO.. In my opinion, the PS product is awesomly improved. I´m looking forward to the product. Please do so to Image Magic to let them know. I recommend PS for $70 – $100. The money should be the right price for a true professional, but unfortunately, most people look at the price tag and then go for the cheapest pix. So by aniway, go for the PS. You´ll regret mostly the money that you spend. But if you do it on purpose, you´ll be pro. Sorry I´d been a bit negative toward the post I'm a seasoned photographer who owns literally hundreds of thousands of dollars of photographic equipment. I'm also a lifelong fan of the Adobe suite of products, including my first Adobe Photoshop, Adobe Photoshop Lightroom, and Adobe Photoshop Elements. All my loyal files are stored in my main software; even though the app does auto-backup as soon as you open the program. Nice review, like many others.. especially like how the author thinks of the app as a program. Thanks. But the way the program updates does seem slow at times but not enough for me to even consider the app half-broken. I like the new way of opening a project but I wonder if that's not just a one-off issue. Anyway, the author wasn't given any media to work with in the review and that's always a concern.. fewer people will read this review without media to compare.

Reasons behind the shift to web-based Photoshop
Photoshop was the first Adobe application and the first serial desktop application to shift to the web. Over the last two decades, Adobe has been a leader in the web application space, creating early web experiences for online document creation, WebPAC for the.NET platform, and more. Creating a web-

based prototype to see how big of an idea worked and what further needed to be added was important to us to make sure we were talking to developers and users to test our assumptions. The basic idea is that of using a drag and drop interface to create shapes. These shapes may be lifted one-by-one, and having them combine and behave as a cohesive entity is similar to making a mar onglass el object. The idea of running software as complex as Photoshop directly in the browser would have been hard to imagine just a few years ago. However, by using various new web technologies, Adobe has now brought a public beta of Photoshop to the web.Oct 26, 2021 — Updated May 12, 2022 *Thomas Nattestad* Twitter *Nabeel Al-Shamma* GitHub
