Photoshop brings a new level of control to video editing. The new Upright Features make it easy to make a vertical image perfectly legible, and accurately convert a vertical video to portrait. You can place text vertically, and even fill in areas so that a video is no longer in landscape or portrait mode, but rather in a window. Using the Pen tool, you can now create vector masks for color and image media. This allows you to easily replace individual, semitransparent objects in an image with a mask stripped of its transparency. The vector mask is also a vector object, allowing you to size and shape it to your needs. Board editing gives you the ability to move and transform text using an Editboard—a grid that allows you to manipulate the Position, Size, and Orientation of individual board components, which react to changes in the position of the cursor. This allows you to move text, add URL links, change board formatting, and more. For compositing, Photoshop now gives you large format support. You can work with full-screen image and video media. You can create a wide selection, using scopes, and use layers with footprints for accurately tracking where you're working. One of the most used tools in Adobe Photoshop is the Graphic Styles. It takes a page from the Microsoft Office Prism Visual Styles and templates the work of Microsoft's Font Color Designer . Simply select a pre-defined text or image style from the styles library, and you're ready to style the next photo with a defined look. If the style doesn't exactly match the photo, you can freely tweak the color and style, which makes it a very useful tool for photo editing.
