Photoshop is widely regarded as a must-have Adobe product for professional artists and designers as well as an absolute staple for the casual enthusiast. Today, it gives technology creators across industries--including entertainment, education, games, design, architecture, printing and more--the tools they need to create, enhance and publish their work with precision. Clients can collaborate by reviewing content on a projector or a nearby TV before applying edits. Adobe Presentations also let you add a live, video or print tutorial to your presentation by recording a short video of you walking through your slideshow. A built-in web-browser makes it easier to share your work on an attached projector or TV directly from the software. With the new Touch Up Brush Tool in the Layers panel, you can make one-click corrections to individual pixels without having to open individual editing tools. The "pencil" tool automatically converts foreground and background colors to black and white. For a new crop of creative professionals, a slate of features in Photoshop Camera Raw make it easy to photo-edit and retouch digital images outside of Photoshop. Image hosting platforms, like Google's Project Imgur and Dropbox, make it possible for creators to share photos online with their brands, projects or communities. Cameras, lenses, and smartphones store more data than ever, but the majority remains hidden from view. It can be difficult for designers and creators to untangle, organize and manage all that content.
